

Note:

1. During the use of the toolbox, all files must be **loaded from the path**, cannot be directly selected from the software interface's layers, otherwise an error will occur.
2. If "workspace %123%\ does not exist" appears during the use of ArcGIS Pro, it is recommended to lower the **ArcGIS Pro version** to the recommended version or use **ArcGIS** software for this step. ArcGIS Pro can still be used for other steps.
